Mongo DB Task

ecommerce-app/ Screenshots

Task 1: Develop an Ecommerce Application using Next.js, Node.js, Express.js, and MongoDB

Students will develop a basic ecommerce application with a structured project containing separate frontend and backend folders, where the backend will be built using Node.js, Express.js, and MongoDB, and the frontend will be developed using Next.js and Tailwind CSS. In this task, students will perform basic API development for the ecommerce system by setting up a backend server, connecting it with MongoDB, and creating a simple API to fetch and display product data from the database.
